Due to the phenomenal success, we are bringing back the program again at the request of many students.

Generative AI is the latest in Machine Intelligence Technology where you can develop systems that can learn from existing artifacts to generate new, realistic artifacts and can produce a variety of new content, such as images, video, music, speech, text, software code and product designs. It uses several techniques from a trained set of data using mathematical and statistical computing learning algorithms and commonly creates content in response to natural language requests.

This program is aimed at developing experts in Generative AI and participants can pursue new careers in this area. There will be some material/system access costs, which need to be taken care of by the participants. Details will be given in the Orientation.

Pre-requisites: Review of Python Programming and Data Science (Links will be provided for registered participants)

Topics Covered in the Training Program:

- | | |
|--|--|
| 1. AI Context: GenAI | 6. Frameworks: LangChain, vLLM etc. |
| 2. Traditional AI Practice: MLOps | 7. Compression/Quantization: GPTQ, AWQ etc. |
| 3. GenAI Practice: LLMops | 8. Vector databases: PineCone, Faiss, Chroma, Vector Search etc. |
| 4. Foundational Models: Meta Llama 2, OpenAI GPT, Google PaLM 2 etc. | 9. GenAI Usage Architectures: IR & RAG |
| 5. Prompt Engineering: Prompt Design & Prompt Templates | 10. APIs: Fast, Flask & gRPC |
| | 11. Applications: UI & CLI |
